

Hello to all this a guide how i rescale the cuts into silhouette studio hope it help:

Lets begin

1. Open the silhouette studio and load your faivor cut

2. With the select tool you select the draw you want

Now you will see that numbers appear at the selected draw image

3. Now take you favoirite meansure tool and go at the original decal sheet (you hcan measure with short rule but i prefer Digital Caliper)

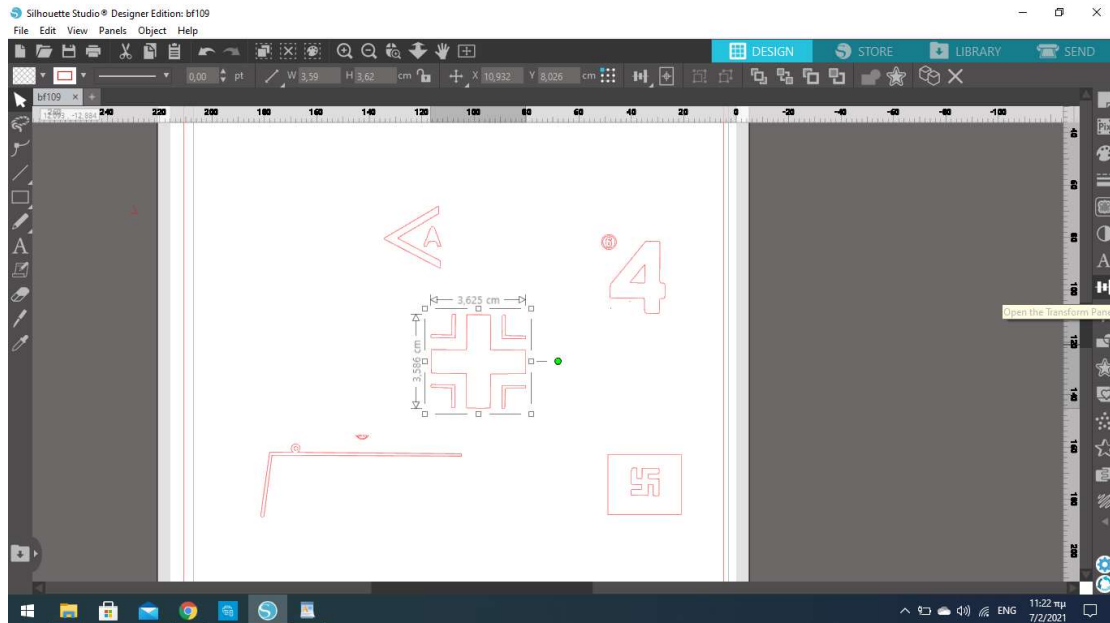

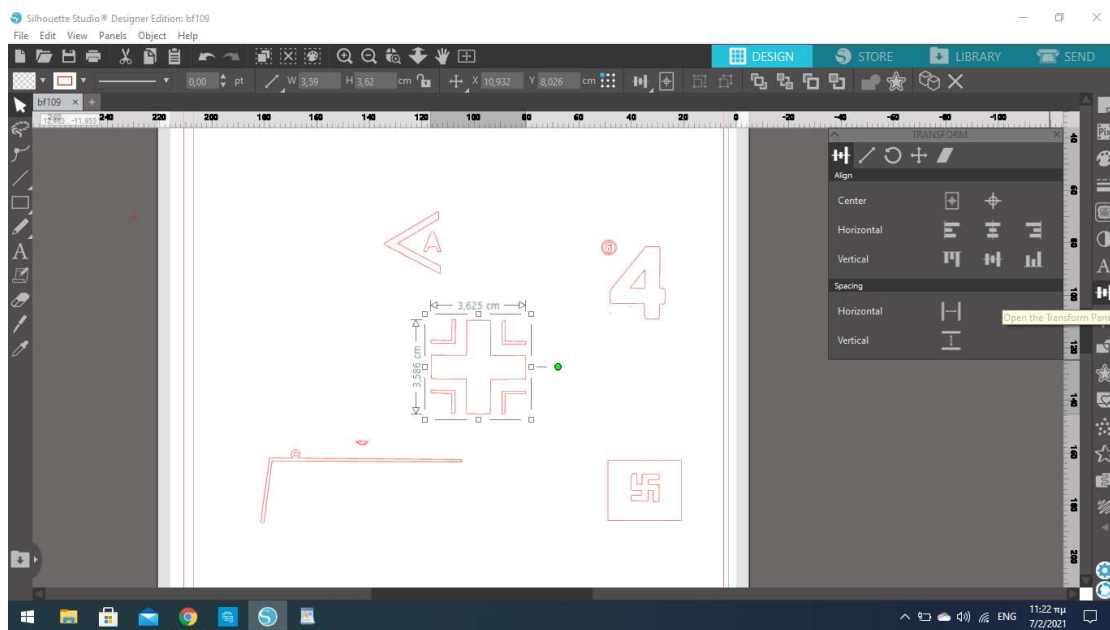

4. Now we go back to silhouette and rescale our drawing

we open Transorm Panel

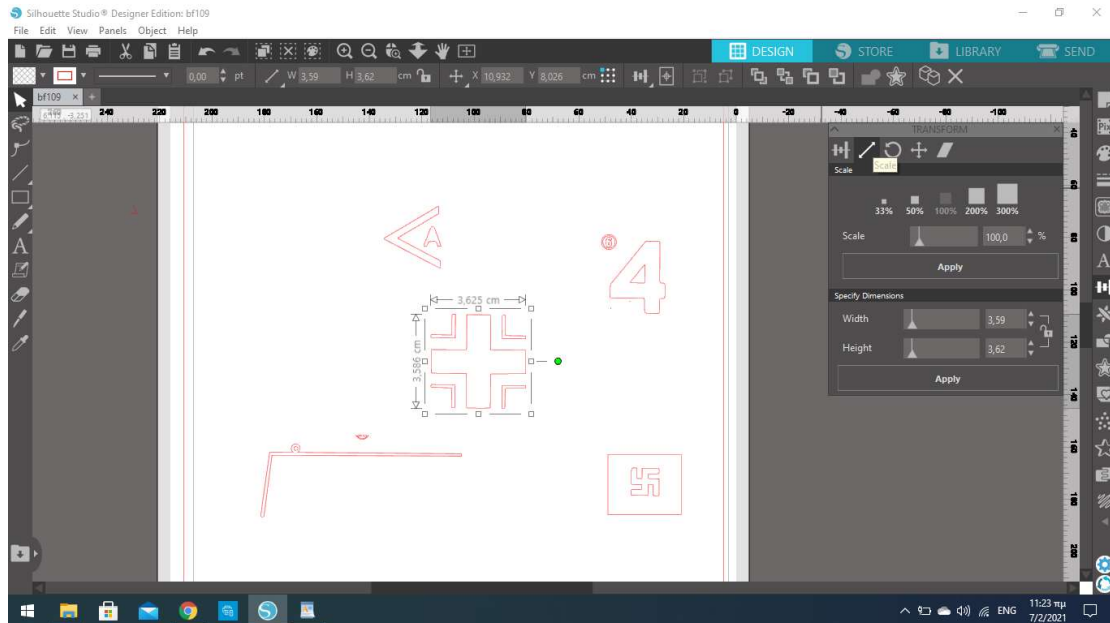

Then the transform panel will apper

and we go to Scale

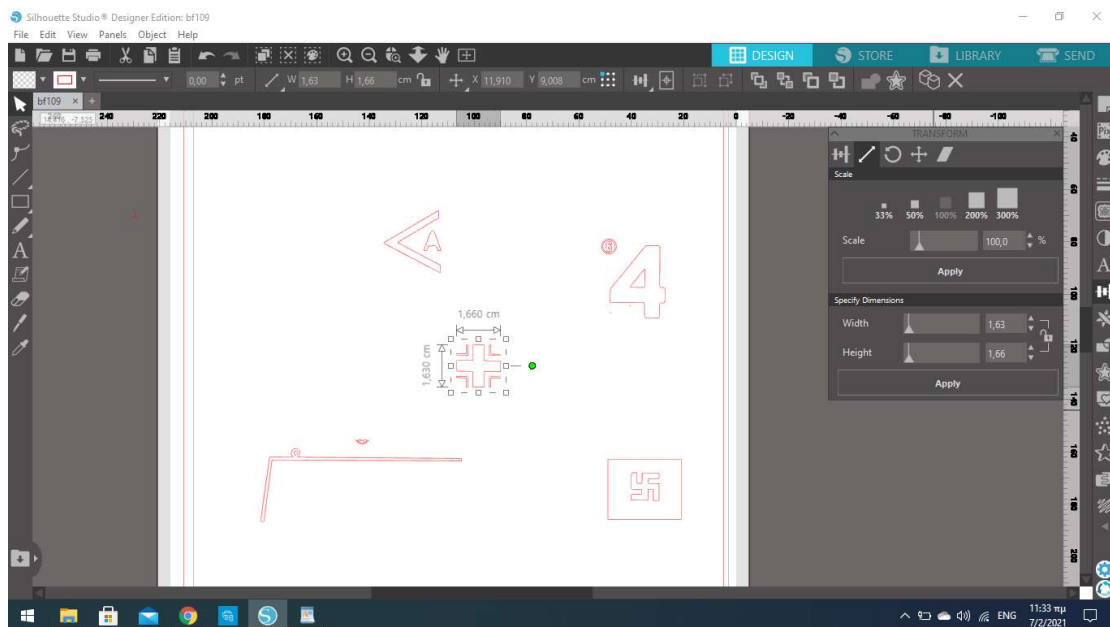

Now you can see the dimensions of the selected drawing image

My decal was 16.26 x 16.62 (example)

We have to convert mm to cm that i am using at the software

An example  $16.62\text{mm} / 10 = 1.662\text{cm}$

Then we put the number from conversion 1,626 x 1,662

And we click Apply

Thats it your drawing now is at the meansure you want

(The sihouette studio cant scale 1,662 so it convert's to closer automatic which it was 1,660 x 1,630

Make a test cut to see what you make and you are finish

Thanks for reading i hope it helps :)

Giorgos

(ps share your knowlage and help other's)
